

Sometimes Off- The-Shelf Solutions

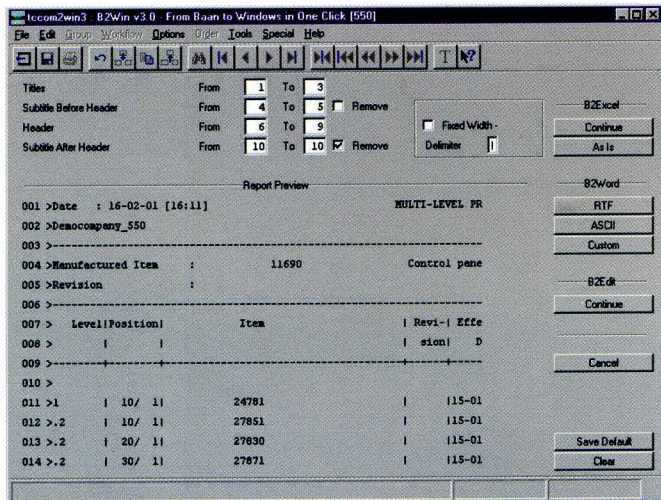

Are Simply... Better

You did not write the ERP system you are using today..
There is no reason you should develop utilities for it.

www. **NAZDAQ** .co.il

B2Win - The Server version

This best selling product from Nazdaq became the ultimate utility for taking output from Baan to Excel and Word. It is installed at hundreds of servers in more than 30 countries.

B2Win is fully installed on the Baan Server, and there is no need to install it on every single PC in the organization. **B2Win** is a Baan Tools session that downloads the report output from the server to the PC, while copying an Excel or Word Macro to your PC. This Macro is responsible for cleaning the report output and formatting it in a way that it can be used in Excel and Word.

B2Win 3.0 has been revised to match almost any Baan Report with a standard looking layout. It is a result of testing on hundreds of Baan standard and customized reports.

New in B2Win 3.0

- Better handling of multiple-title reports in Excel
- Data Dictionary feature for better converting of Leading Zero and Date columns

- Saves your report parameters
 - Makes it possible adding Logo to Word Documents
 - Makes it possible for a unique Macro per Word document
- The server version of B2Win works for Baan IVc and higher.

B2Win - The Stand Alone Version

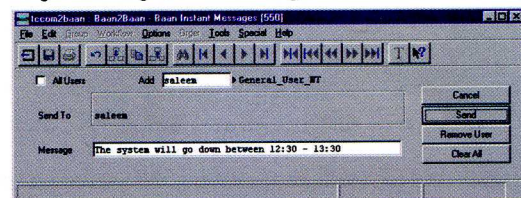

This version of B2Win was developed for Baan IVb or earlier versions and for companies that do not wish to deploy B2Win for all users.

The Stand Alone Version includes the same functionality as the server version. It is installed on the local PC and does not require any Baan Tools expertise to install it.

Baan2Baan Baan Instant Messenger

This utility allows system Administrators to send an instant message to all users logged into Baan. This utility is very useful in case of an un-scheduled shut down, MRP run, or any other system message.

Baan2Baan works for Baan IVb and higher on Unix installations only
