

b2Win SUITE

NAZDAQ Output Management Platform

b2Win^{SUITE}

NAZDAQ Output Management Platform

The b2Win Suite is the output management platform that every company needs in conjunction with its ERP system. This innovative product improves internal reporting and outbound communications with existing business partners.

b2Win enables the transferring of ERP reports directly into MS Excel, MS Word, PDF and other formats and enables seamless e-mailing, faxing, printing, and archiving of documents, based on predefined preferences.

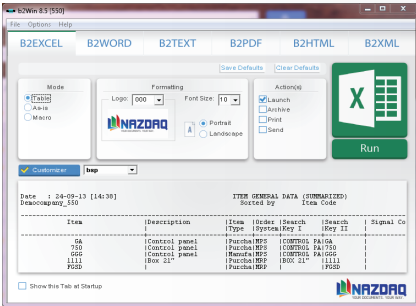

b2Win Main Features:

Based on more than 15 years of experience with output management systems, *b2Win Suite* was released as the new platform for output management with the following features:

1. Compatible with different ERP and business systems
2. Connects with multiple servers
3. Web-based
4. Mobile-ready
5. Resides on premise or in the Cloud
6. Can completely run on the server or work with a client application for greater integration with office programs

b2win Transform

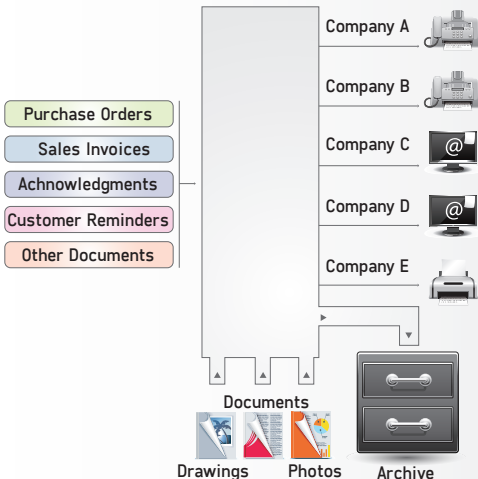

The ultimate utility for enhancing and transferring ERP reports directly into MS Excel, MS Word, PDF, XML, HTML, and Notepad.

b2Win Distribute

The ultimate utility to automatically e-mail, fax, print, and archive business documents such as purchase orders, sales invoices, reminders and acknowledgments from the ERP system.

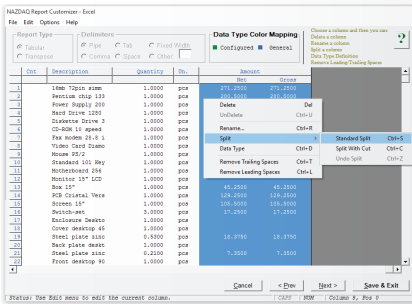

b2Win distribute can handle any output stream by performing the following: parsing output into individual documents, recognizing the business partner for each document, matching the business partner with the e-mail address, and finally delivering each document according to predefined preferences.

b2Win Excel Customizer

Customizes the structure of ERP reports before transferring them into Excel when high quality, professional Excel files are needed.

With its user-friendly graphical user interface, key users can customize a sample report with Excel-specific features so that columns can be split, sub-headers can become additional columns or totally removed, and data types can be forced. These conversion configurations can be saved for future generations of Excel files.

b2Win PDF Designer

Changes the design of ERP reports before transferring them into PDF files when high quality, professional PDF files are needed.

With its friendly WYSIWYG user interface, the administrator can create a personalized document design with customizable fonts, footer and background design, logo insertion, and text layout. This customized design configuration can be saved for future generations of PDF files.
