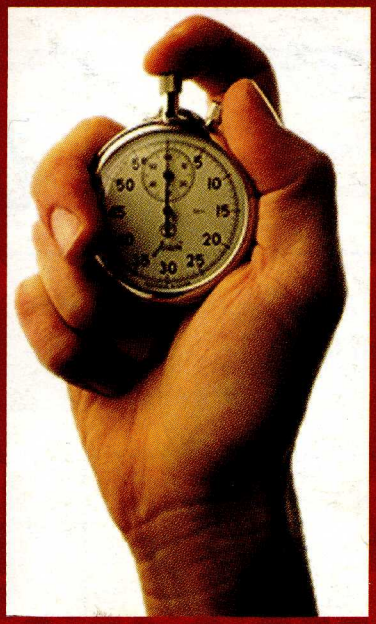
NAZDAQ

Nazareth Data Quest Ltd.

B2Win

B2Win (Baan to Windows) allows practical integration between Baan output and Microsoft Office products.



B2Excel

Take your Baan output from Baan to Ms-Excel in one click. Once in Excel, you can print graphs and do additional calculations on your output.

B2Word

Take your documents from Baan to Ms-Word in one click. Once in Word, you can edit the document, add a logo and then print it or email it.

NAZARETH DATA QUEST

NAZDAQ Nazareth Data Quest Ltd.

B2Win is a simple and Elegant Add-on that automatically downloads every Baan Report directly into Excel, Word or Notepad, formats it, for you to do additional calculations or editing on the output from the ERP system.

How is it done today?

1) Send report output to device "ASCIF".
2) Locate the file on your server and transfer it using FTP to your PC.
3) Launch Excel.
4) Read ASCII file, by defining the scope of each column.
5) Delete all headers and subtotals from report.

Those that do this know it is not fun. In B2Win, this is all done in one click! Just choose device "B2Excel", and data is loaded and formatted in your excel file.

Accountants

Download a Baan Report into Excel, add additional surcharges not included in Baan, run a Macro and print the report in a different sorting.

Material Planners

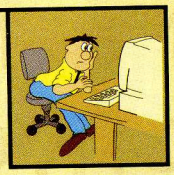
Analyze certain fields from the item data.

Sales Representatives

Want to download the price list and open sales orders into a laptop before a business trip to a customer.

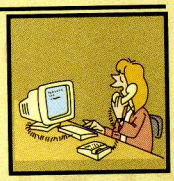
Sales Administration

Want to send a Baan document to a customer, but want to do additional editing in Word before sending it.



Buyers

Analyze pricing of suppliers or edit a purchase order before sending it.



And much more...

NAZARETH DATA QUEST

NAZDAQ Nazareth Data Quest Ltd.

B2Win 2.5

B2Win allows you to benefit from software you already have and use. No need to learn a new tool and invest in consulting services.

1. Is installed on the Baan server within minutes. All users can use it with one license per server.
2. Run your report and Excel or Word are launched automatically, press an icon, and report is loaded into Excel.
3. Negative numbers with the minus sign on the right side are loaded as numbers into Excel.
4. Baan headers are defined as headers in Excel.
5. Subtotals are loaded in the right place, exactly as the same place they appear in the report .
6. The system supports languages other than English, such like Dutch, German and Slovenian.
7. Ability to choose what sub-headers to load into Excel on the fly.
8. Ability to choose a delimiter for Excel on the fly.
9. Ability to define a device for loading reports into word with pre-defined headers with a logo.

The server version of B2Win works for Baan IVc and higher. For customers who do not wish to install B2Win on their server or for Baan IVb or Triton customers we offer a PC version of B2Win with the same capabilities.
